

Volume License Deployment Guide

Deploying Toast 17 Titanium (Volume License) using Apple Remote Desktop

Toast 17 Titanium (Volume License) can be distributed to client machines via an Apple Remote Desktop session.

To deploy Toast 17 Titanium using Apple Remote Desktop

1. Launch Remote Desktop.
2. Select the destination machine(s) from the All Computers list, or from an existing custom list. Make sure the Remote Manage in Sharing System Preferences has been opened on client machine with "Delete and replace items" and "Copy items" selected.
3. Select "Install Packages..." from the dropdown "Manage" menu.

4. Add the "Install Toast 17 VLP" package to the Packages list.
5. Toast 17 Titanium includes a large collection of menu styles for Video disc projects. If installing on a large number of systems or you have a slow network connection, you can reduce the installation size to reduce network usage. For details on reducing the installation footprint, see "Deploying Toast 17 Titanium (Volume License) Manually".
6. After completion, Toast 17 Titanium will be installed into the /Applications folder of client machine in the "Toast 17 Titanium" folder.
7. When Toast 17 Titanium is launched on client machines for the first time, users might be prompted for an Administrator password in the Setup Assistant. This is unavoidable, because an Administrator password is required to install kernel extensions required for normal operation of the product.

Deploying Toast 17 Titanium (Volume License) Manually

Toast 17 Titanium (Volume License) can be distributed to client machines manually. Consider this option if any of the following are true:

1. Your organization does not use Apple Remote Desktop.
2. You want to reduce the size of the installation.
3. You want to remove optional applications from being available to client machines.

To install Toast 17 Titanium manually on client machines

1. Double-click and launch "Install Toast 17 VLP", and complete the installation on a single machine, but do not run the Toast Titanium application.
2. Locate the following two folders, and copy them to a location where you will distribute them to other machines. This can be a network folder, a USB key, or even optical media.
 - /Applications/Toast 17 Titanium
 - /Library/Application Support/Roxio/Toast Menu Styles
3. You can remove optional applications, such as DiscCatalogMaker RE, that will not be used by your organization. Simply delete them from the Toast 17 Titanium folder. Toast 17 Titanium can run without the additional applications.
4. The "Toast Menu Styles" folder contains video menu styles used by Toast in DVD-Video and other disc-based video projects. There is a single menu embedded in the Toast Titanium.app, so removing several or even the entire "Toast Menu Styles" folder will still allow users to create disc-based video projects.

5. When you have completed any optional changes to the two folders, distribute them to the same locations on your target machines manually or through your method of choice.
 - Toast 17 Titanium → /Applications
 - Toast Menu Styles → /Library/Application Support/Roxio
6. When Toast 17 Titanium is launched on client machines for the first time, users might be prompted for an Administrator password in the Setup Assistant. This is unavoidable, because an Administrator password is required to install kernel extensions required for normal operation of the product.
